DIRECTOR'S NOTE

"I would like to express my gratitude and sincere thanks to all our partners and clients for helping us reach this milestone of completing 15 years in the industry. When we started our journey in December 2008, the environment industry was restricted to only compliance driven services and that it took us considerable time to convince some of the industries, city administration and government departments to undertake projects that were voluntary and forward looking.

I am glad that these initiatives have come to the mainstream and become important toolkits for **planning, decision making, monitoring, and reporting.**

As we look at the developments of past 15 years and stare at the next 15 years of evolution of this environment services industry, we have realized the importance of following key variables or discipline for all stakeholders:

- a) Collection of Baseline Data, especially primary data.
- b) Analysis, interpretation, and representation of analyzed information.
- c) Goal setting (be it Net Zero, No Net Loss, Nature Positive etc.) and continuous monitoring of data and information.
- d) Rigorous adherence to Mitigation Hierarchy for planning and decision making.
- e) Implementing projects with final goal in mind and not short-sighted approach for immediate gains.
- f) Be Honest with Reporting.

I am confident that we are all moving in the right direction with some of you being leaders and many others being followers in this increasing trend of being responsible corporate citizen or administration. ***Let's join hands and collaborate for a future that we all can be proud of, as we bequeath this mother earth to our future generations.***
